

G¹ Program Highlights

POLYAIR
AIRSPACE

OPERATOR FRIENDLY

- > Our film is easy to load onto the machine; **a simple three step process.**
- > All the operator has to do is **press start** to get the machine to operate once the film is loaded.

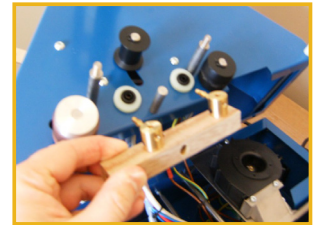

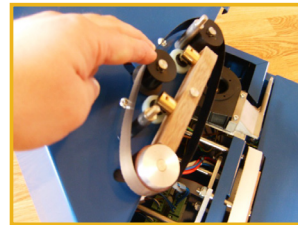

RELIABILITY

- > Our machines are **extremely reliable**, with very few emergency calls.
- > We have G1 machines exceeding 5 years usage that still are operating as effectively as new machines.

G-Series Machine Maintenance

The Polyair G-Series AirSpace machines **DO NOT** require the use of any tools to change the main wear parts. Access to the machine's wear parts requires simple hand turning of two fasteners to remove the cover and replace the parts.

LONG LIFE WEAR PARTS

- > Of the three wear parts - on average **only one needs to be changed every 2 years** and the two others after about 500 rolls of film (usually longer).
- > We also include with each machine one each of the two main wear parts (located inside the machine for easy access) to mitigate any machine down time.

TOLL-FREE OVER THE PHONE SERVICE

- > We have a 1-800#, printed on the machine, to provide **service over the phone.**
- > Over 90% of all issues can be resolved over the phone
- > If an issue **can not** be resolved over the phone - **Polyair** will either send one of our **techs in to service on site** or courier a machine overnight.

TRAINING

- > We provide training for each machine we place. We review every aspect of the machine including **hands on direction** on how to change the wear parts, how to load the film and explain how the 1-800# works.
- > There is a **reference manual** we provide with each machine.
